

IN THE CLAIMS:

✓ ✓
Please cancel Claims 1-8 without prejudice or disclaimer of the subject matter recited therein.

✓ ✓
Please add Claims 9-25 as follows:

Sub B1
a7

9. (New) An image forming apparatus comprising:
an envelope including first and second substrates disposed to form a clearance therebetween;
image forming means disposed between said first and second substrates within said envelop, said image forming means including an electron emitting device disposed on said first substrate and an image forming member disposed on said second substrate, said image forming member forming an image responsive to an irradiation with an electron emitted from said electron emitting device; and
a heat insulating member disposed on an outer surface of at least one of said first and second substrates except for a surface region on said image forming means.

10. (New) An image forming apparatus comprising:
an envelope including first and second substrates disposed to form a clearance therebetween;
image forming means disposed between said first and second substrates within said envelope, said image forming means including an electron emitting device disposed on said first substrate and an image forming member disposed on said second substrate, said image forming member forming an image responsive to an irradiation with an electron emitted from said electron emitting device; and

a heat insulating member disposed on an outer surface of both of said first and second substrates except for a surface region on said image forming means.

11. (New) An image forming apparatus according to claim 9, wherein said heat insulating member is disposed on said second substrate.

12. (New) An image forming apparatus according to claim 9, wherein said heat insulating member is disposed on said first substrate.

13. (New) An image forming apparatus according to claim 9, further comprising heat dissipating means disposed on said surface region.

Q7

14. (New) An image forming apparatus according to claim 10, further comprising heat dissipating means disposed on said surface region.

15. (New) An image forming apparatus according to claim 11, further comprising heat dissipating means disposed on said surface region.

16. (New) An image forming apparatus according to claim 12, further comprising heat dissipating means disposed on said surface region.

17. (New) An image forming apparatus according to claim 9, further comprising a heat conducting member disposed between an exterior surface of said envelope and said heat insulating member.

18. (New) An image forming apparatus according to claim 10, further comprising a heat conducting member disposed between an exterior surface of said envelope and said heat insulating member.

19. (New) An image forming apparatus according to claim 11, further comprising a heat conducting member disposed between an exterior surface of said envelope and said heat insulating member.

A7

20. (New) An image forming apparatus according to claim 12, further comprising a heat conducting member disposed between an exterior surface of said envelope and said heat insulating member.

21. (New) An image forming apparatus according to claim 9, wherein said heat insulating member has a thermal conductivity smaller than said envelope.

22. (New) An image forming apparatus according to claim 17, wherein said heat conducting member has a thermal conductivity larger than said envelope.
